Top Skills

Full-stack .NET Development:
Cloud Computing (AWS Lambda)
REST APIs Development

Languages

English (Full Professional)

Certifications

Oracle Certified Professional: Java
SE 11 Developer

Túlio Ribeiro dos Anjos

Full-stack .NET & Cloud Developer
Campo Grande, Mato Grosso do Sul, Brazil

Summary

Full-stack developer. Experience in modernizing legacy systems and building scalable web applications. Proficient in .NET and Java stacks. Interested in challenging problems and efficient solutions.

Experience

BairesDev

2 years 9 months

Full-Stack .NET & Angular Engineer

February 2025 - Present (1 month)

Currently on full-stack development for a leading client project. Focus on .NET 8, Angular, and cloud-native architecture.

.NET Core Engineer

March 2023 - February 2025 (2 years)

Campo Grande, Brazil; Overland Park, KS

Developed .NET 8 AWS Lambda services for retail integrations. Created scalable systems to synchronize large retail inventories (100,000+ SKUs) with eCommerce platforms like Shopify. Solved API throttling issues using data diffing and intelligent retry logic. Ensured production reliability with comprehensive error handling and CloudWatch logging. Separately, built a fast image processing Lambda function (.NET 8/C#, SkiaSharp) for on-demand image collages, keeping response times under a second for the end-user application.

Java & Spring Engineer

June 2022 - March 2023 (10 months)

Campo Grande, Brazil; San Francisco, CA

Modernized legacy Java APIs to Spring Boot REST APIs at a startup in the privacy space. The old APIs were overly complex, so we rebuilt them in Spring Boot. This immediately simplified development and reduced maintenance overhead. We also moved to Spring Data JPA and Hibernate for data access, which is cleaner and less error-prone than raw SQL. Everything was backed

by integration tests. The company's focus is on making privacy practical for fast-moving software teams.

GEOI2 Tecnologia da Informação LTDA.

Full-stack Developer

August 2019 - June 2022 (2 years 11 months)

Campo Grande, Mato Grosso do Sul, Brazil

Full-stack Development. Overhauled a slow legacy JSF system ('eContas') by rebuilding it with Angular 13 micro-frontend and Spring Boot backend. Result: much faster and better user experience. Automated database setup and ETL for government audits with a Java CLI tool. Supported diverse databases (SQL Server, MySQL, etc.) and on-demand file-based instances. Also implemented gzip compression for MongoDB JSON data, reducing volume by 90% for efficient data transfer in low-bandwidth environments.

Fonte Tecnologia

Full-stack Developer

August 2017 - August 2019 (2 years 1 month)

Campo Grande, Mato Grosso do Sul, Brasil

Full-stack developer building web applications. Used .NET WebAPI for backend and Knockout.js for frontend. Implemented real-time functionality with SignalR. Focused on building and maintaining robust applications.

PSG Tecnologia

Full-stack Developer

March 2013 - August 2017 (4 years 6 months)

Campo Grande, Mato Grosso do Sul, Brasil

Full-stack developer building .NET applications. Used C#, JavaScript, and T-SQL for development. Proficient with .NET MVC, WebAPI, Entity Framework, and database-first/code-first methodologies.

Education

Uniderp

Bacharelado, Engenharia de Computação · (January 2009 - December 2013)
